

TRACKER
Retrieve

TRACKER Retrieve

One vehicle is stolen every two minutes* in the UK and less than half are ever recovered, and with two million vehicle related thefts taking place each year, car crime accounts for almost 20% of all recorded crime.

» Organised crime

Stealing cars is no longer a game of chance

Our cars are important to us and form an essential part of our daily lives. Even though you've fitted the best alarm and immobiliser to help protect your pride and joy, if a thief wants to steal your car, he usually will.

» Why should I fit TRACKER Retrieve?

To date, TRACKER with the police have been responsible for the recovery of over 17,000 vehicles worth a staggering £380million. These recoveries have also led to the arrest of over 1,700 vehicle thieves and their accomplices.

* British Crime Survey 2002/2003.

*Fit TRACKER
the UK's market
leading stolen vehicle
recovery service*

How it works.

With TRACKER installed, your vehicle's in safe hands.

TRACKER is operated by all of the UK's police forces. Using Very High Frequency (VHF) technology, the police can track a stolen vehicle even if it is hidden in a garage, container or underground car park.

» TRACKER Retrieve

TRACKER Retrieve is a small electronic homing device hidden in your vehicle.

When you report the theft of your vehicle to the police and TRACKER Network, the unit is activated by the TRACKER Control Room via a network of radio transmitters. The unit then emits a silent signal, which allows computers fitted in police cars and aircraft to track the vehicle to its exact location.

TRACKER Retrieve is Thatcham Quality Accreditation (TQA) approved.
